

Number Tower Game User Manual

- Run python code (towerGen.py) to print random numbers to files
- Make sure that Mars and the text files generated by the python code are in the same location
- Run mars code (TeamProject.asm) which uses these text files
- Select the level difficulty you wish to play at (1-5)
- Choose the letter that corresponds to which box you would like to guess
- Input the correct number for that box
- If incorrect number is guessed the user is prompted to guess again
- Once all boxes have been guessed the user wins the game
- User is then prompted whether or not they would like to play again
